The BLUE SPORTS PASS-AID TRIANGULAR PASSER is a training aid designed for hockey sessions that focus on accurate passes, direct ball or puck control, and smooth gameplay. The triangular shape emphasizes repeatable passing angles and supports structured drills, such as those regularly used in club and youth training.

- Product Type: Passing aid for hockey training
- Shape: triangular design
- Training focus: Passing, rebounds, and ball or puck control
- Applications: Technical training at the club level, team training, and individual drills
- Training benefits: Supports repeatable passing sequences from various angles

Product information

- Design: Designed for a compact training station

For coaches, schools, and clubs in particular, a clearly structured training station is often more valuable than unnecessarily complicated equipment. A triangular passer brings order to passing patterns because passes and returns from multiple directions can be seamlessly integrated. This helps in designing drills for first touches, quick give-and-goes, and timing in team play. It's also practical for youth programs because sequences become easier to understand and can be repeated more frequently.

If you're planning multiple stations for technical training, it's best to consider how the passing routes should be integrated into each exercise.
