BLUE SPORTS SPEED RADAR introduces a clear, easily measurable metric into hockey training: the measured speed of a shot or ball. This is particularly helpful for coaches, clubs, and ambitious players who want to make progress not just a matter of feeling, but something that can be quantified.

- Product Type: Speed measuring device for training
- Applications: Hockey training on the field, indoors, or in a club setting
- Training benefits: Monitoring and comparing shot speeds
- Application: Supports technical drills, competitions, and performance monitoring
- Target audience: Coaches, teams, clubs, and performance-oriented players

Product information

- Model: SPEED RADAR

In everyday training, a Speed Radar is particularly helpful where repetition, technique, and measurable progress come together. Harder shots are just one part of it. Equally interesting is how consistently a shot is executed and whether changes in technique or timing actually have an effect. In club settings, the device can also be easily integrated into station drills, shooting series, or internal comparisons without unnecessarily complicating the workflow.

Since no further technical details are apparent from the information provided, it's advisable to take a quick look at the package contents and specific functional specifications before planning your training sessions.
