3 in stock

MARSBLADE CHASSIS O1 is an off-ice chassis for hockey players who want a riding experience that more closely mimics the motion of ice skating. Especially during regular summer training or when working on specific technical skills, a good chassis is more than just a base for wheels—it noticeably influences rhythm, edge work, and movement patterns.

- System: Marsblade O1 Chassis
- Product Type: Chassis for off-ice hockey skates
- Functionality: flexible chassis design for a movement feel similar to ice skating
- Training benefits: supports hockey-specific movements off the ice
- Size: S

Product information

- Available sizes: S, M, L
- Package Contents: Chassis without wheels or ball bearings
- Assembly: For building a complete off-ice setup with compatible components

The O1 is primarily designed for ambitious club players and youth players for whom off-ice sessions are an integral part of their training. The flexible design sets this chassis apart from rigid standard solutions because it accommodates typical hockey movements more dynamically. This is particularly noticeable during transitions, tight footwork, and repeated technical drills, which are often practiced in the summer or between ice sessions.

Due to the selected size S, the chassis size should be carefully matched to the shoe being used before assembly. Wheels and ball bearings are not included.
